

Triangle Method Learning Log

<p>Graph showing a line passing through points $(-4, 1)$ and $(1, -2)$. A right triangle is drawn with a vertical leg of length 3 (labeled "End -3 (going down)") and a horizontal leg of length 5 (labeled "Start").</p>	<ol style="list-style-type: none"> 1. Choose two points on the line. 2. Mark your start point 3. Mark your end point 4. Calculate rise from start to end <u>-3</u> If your values are increasing = pos If your values are decreasing = neg 5. Calculate run from start to end <u>5</u> If your values are increasing = pos If your values are decreasing = neg 6. Slope as a fraction (rise/run) <u>$-\frac{3}{5}$</u>
<p>Graph showing a line passing through points $(-2, 0)$ and $(2, 3)$. A right triangle is drawn with a vertical leg of length 3 (labeled "End 3 (going up)") and a horizontal leg of length 4 (labeled "Start").</p>	<ol style="list-style-type: none"> 1. Choose two points on the line. 2. Mark your start point 3. Mark your end point 4. Calculate rise from start to end <u>3</u> If your values are increasing = pos If your values are decreasing = neg 5. Calculate run from start to end <u>4</u> If your values are increasing = pos If your values are decreasing = neg 6. Slope as a fraction (rise/run) <u>$\frac{3}{4}$</u>
<p>Graph showing a line passing through points $(-5, -4)$ and $(1, -3)$. A right triangle is drawn with a vertical leg of length 1 (labeled "End 1 (going up)") and a horizontal leg of length 6 (labeled "Start").</p>	<ol style="list-style-type: none"> 1. Choose two points on the line. 2. Mark your start point 3. Mark your end point 4. Calculate rise from start to end <u>1</u> If your values are increasing = pos If your values are decreasing = neg 5. Calculate run from start to end <u>6</u> If your values are increasing = pos If your values are decreasing = neg 6. Slope as a fraction (rise/run) <u>$\frac{1}{6}$</u>

1. Choose two points on the line.
2. Mark your start point
3. Mark your end point
4. Calculate rise from start to end -5
 If your values are increasing = pos (going up)
 If your values are decreasing = neg (going down)
5. Calculate run from start to end 4
 If your values are increasing = pos
 If your values are decreasing = neg
6. Slope as a fraction (rise/run)

1. Choose two points on the line.
2. Mark your start point
3. Mark your end point
4. Calculate rise from start to end -5
 If your values are increasing = pos
 If your values are decreasing = neg
5. Calculate run from start to end 0 (none)
 If your values are increasing = pos
 If your values are decreasing = neg
6. Slope as a fraction (rise/run)
 $-5/0$ (undefined - can't divide by 0)

1. Choose two points on the line.
2. Mark your start point
3. Mark your end point
4. Calculate rise from start to end none (0)
 If your values are increasing = pos
 If your values are decreasing = neg
5. Calculate run from start to end 4
 If your values are increasing = pos
 If your values are decreasing = neg
6. Slope as a fraction (rise/run)
 $0/4 = 0$
