

Using Type-To-Learn 4 at Home

Did you know that your child can now practice keyboarding skills from home? The Fairfield Public School system uses a program called Type-To-Learn 4 (TTL4) in all elementary schools to teach and reinforce keyboarding skills.

As parents in our school system, you are able to download this software and have your child use TTL4 at home. TTL4 runs on both PC and Mac computers.

Welcome to Type to Learn 4
Downloads

For students to use TTL4 at home, download and install the appropriate (Windows or Mac) **full version** program onto your home computer available at <http://ttl4.sunburst.com/downloads/>

Scroll down to the bottom of the web page for the full version. Approx. 1G of hard disk space is needed for the download.

After downloading and installing the program, have your child log in to the application with their TTL4 school username, school password, and account code which should have been supplied to them by the library media specialist, school admin or teacher. The account code 126636 is needed only the first time students log in to use the program.

If you have any questions or problems with the above, please email me at mpsenicnik@fairfieldschools.org

Sincerely,
Mariana Psenicnik
