

What is a Rock?

By 2D

What is a Rock?

People can't make rocks and minerals. They are natural resources.

By Veronica

We need rocks and minerals to
survive.

By Ruaa

Plants and animals need minerals from soil. By Mustafa

We eat things like carrots that come
from soil.

By Dhay

Some small pieces of rock can weigh more than larger pieces of rock.

By Eden

Rocks and minerals are solid.

By Sarah

Rocks contain many minerals.

By Susan

Minerals are natural materials.
By Heloisa

kaitlyn

broken
mineral

If you break a mineral in half it is the
same inside and outside.

By Kaitlyn.

Weathering makes large rocks break
apart.

By Sean

Layers of sediment can build up to make a rock. By Katherina

Heat and pressure make metamorphic
rocks. by Adriel

limestone into
marble.

Heat and pressure over millions of years
can change limestone into marble.

By Caroline

Igneous rocks are made from magma.

By Jake

Lava cools down and turn into igneous rocks. By Alex

Pumice rocks are very light and can float on water. by Lindsay

Artists carve statues out of marble.
By David

Marble is striped. By Joao Pedro

q u a r t z

Rocks may have quartz in them which is very hard. By Jesse
