

# What is a Rock?

By 2G

What is a Rock?

sediment builds up layers to make sedimentary rock

gold is beautiful and yellow

when pressure hits sedimentary rock and it gets hotter it becomes a metamorphic rock

igneous and sedimentary rocks can turn into metamorphic rock

gold is a soft metal

when a diamond is cut it is sparkly

quartz crystal is hard and mica is soft

marble can be almost any color

sedimentary rocks are made from sand, rocks, mud and pebbles

rocks can weigh more because of the minerals inside them

minerals are natural materials

when magma boils it forms pumice

igneous rocks come from magma

gold was the first mineral found

small rocks can weigh more than big rocks

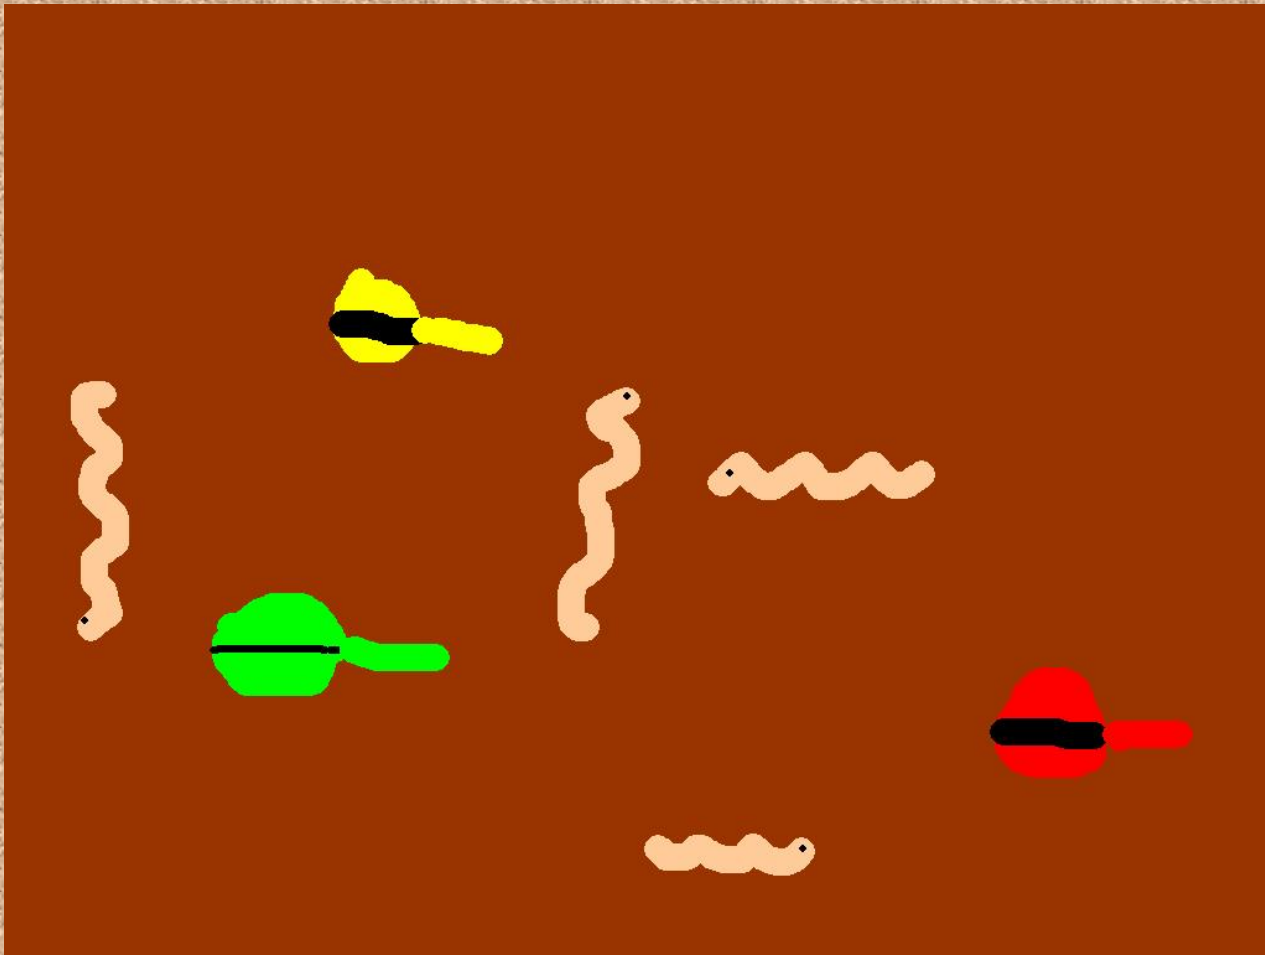

there are over 4,000 minerals on earth

minerals are the same on the inside and the outside

plants and some animals live in soil

jewelers must cut and polish a diamond

Plants and some animals live in soil.

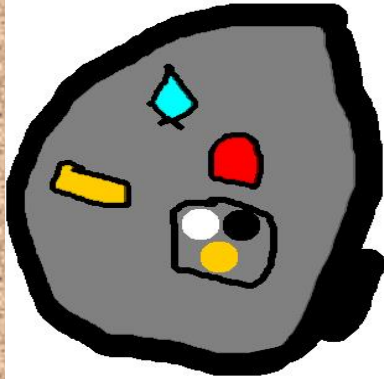

By Brianna

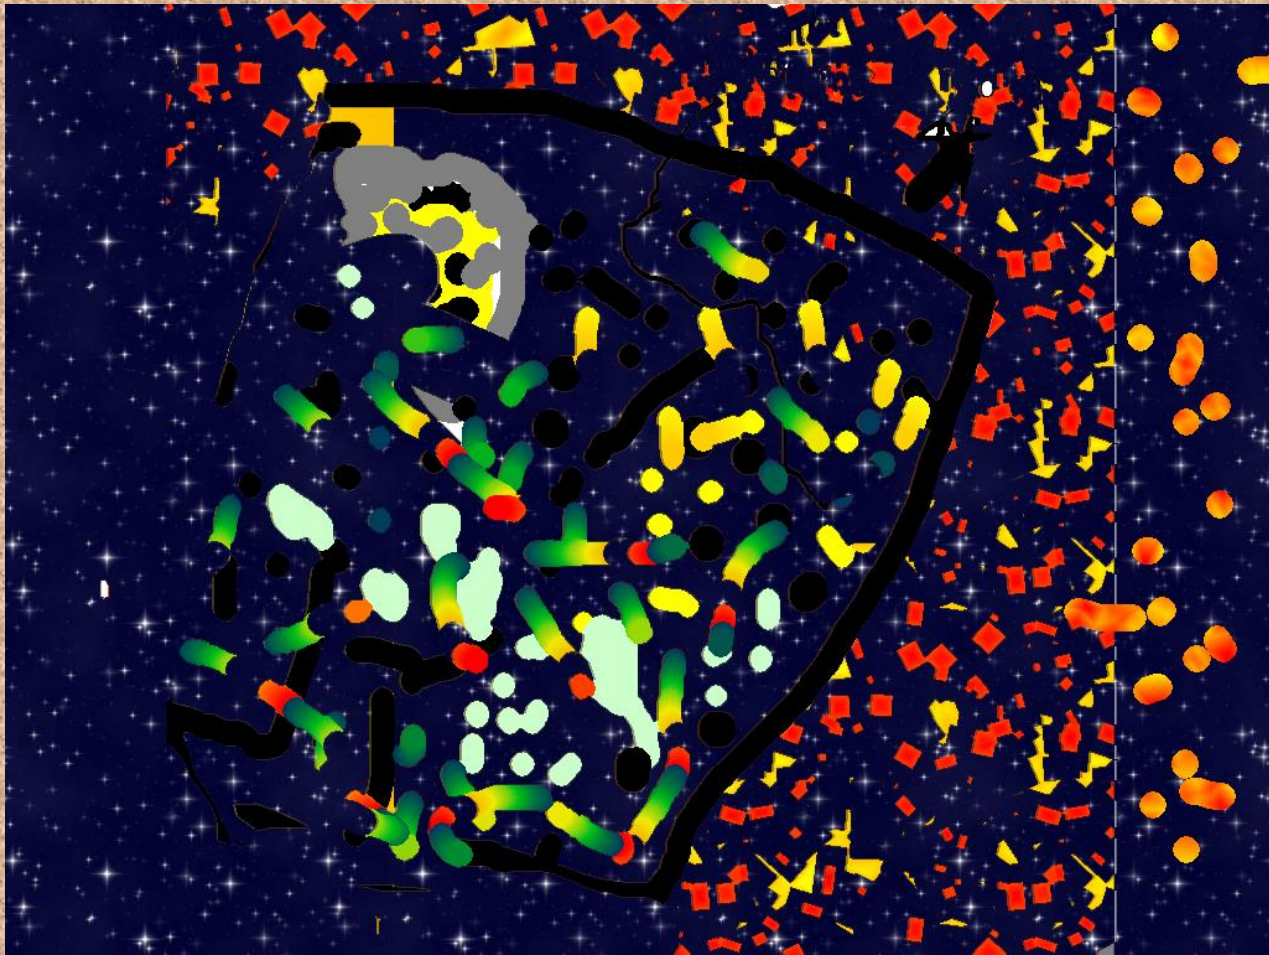

Small rocks can weigh more than big  
rocks.

By Tyshawn

Rock with minerals in it.

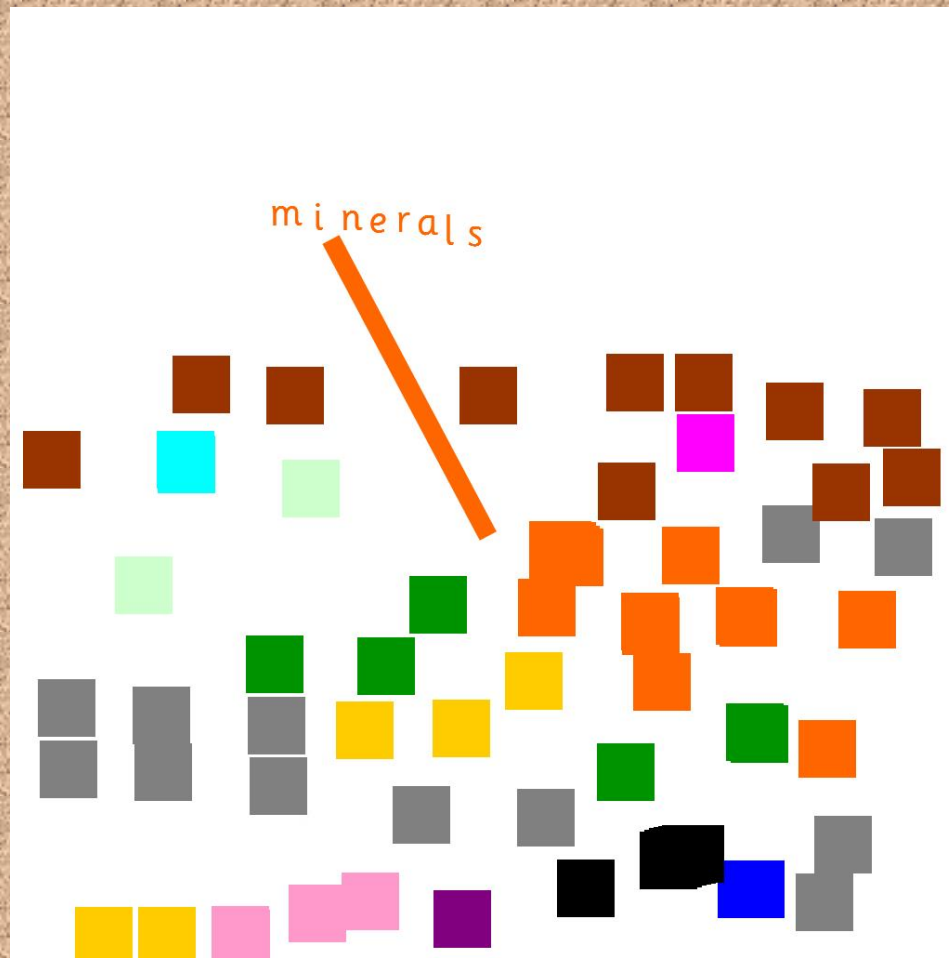

Rocks can weigh more because of the minerals inside of them. By Olive

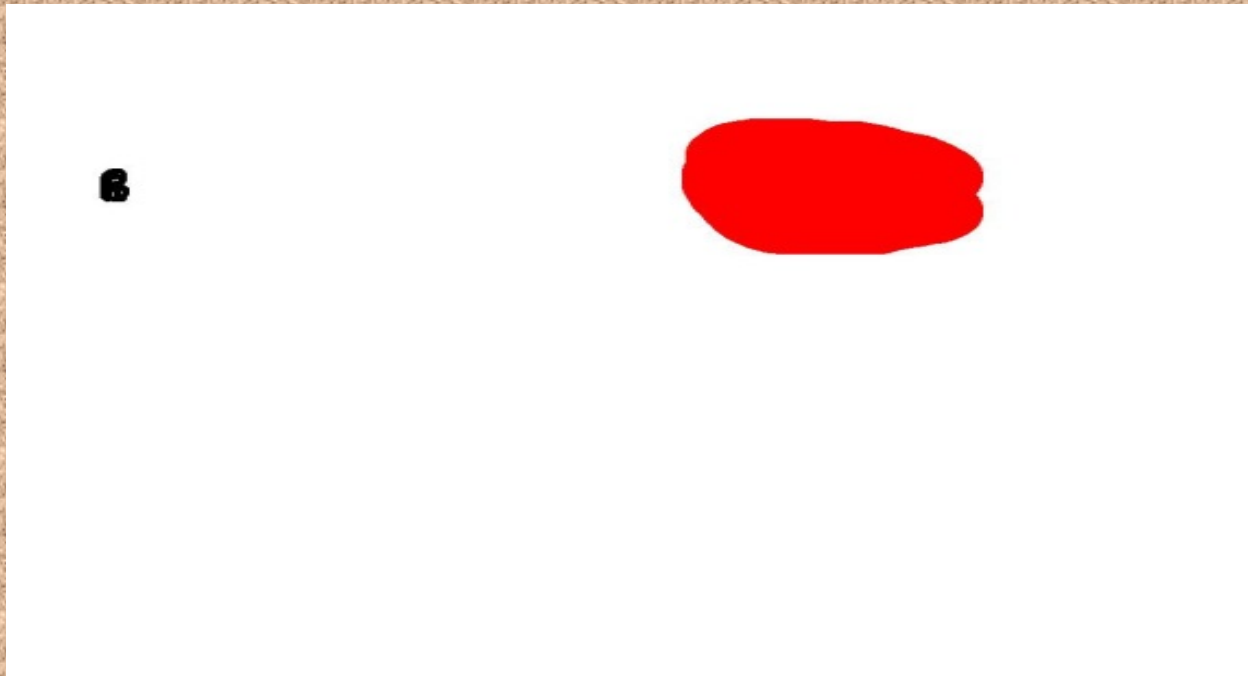

Minerals are natural materials. By Kyle

There are over 4,000 minerals on  
earth.

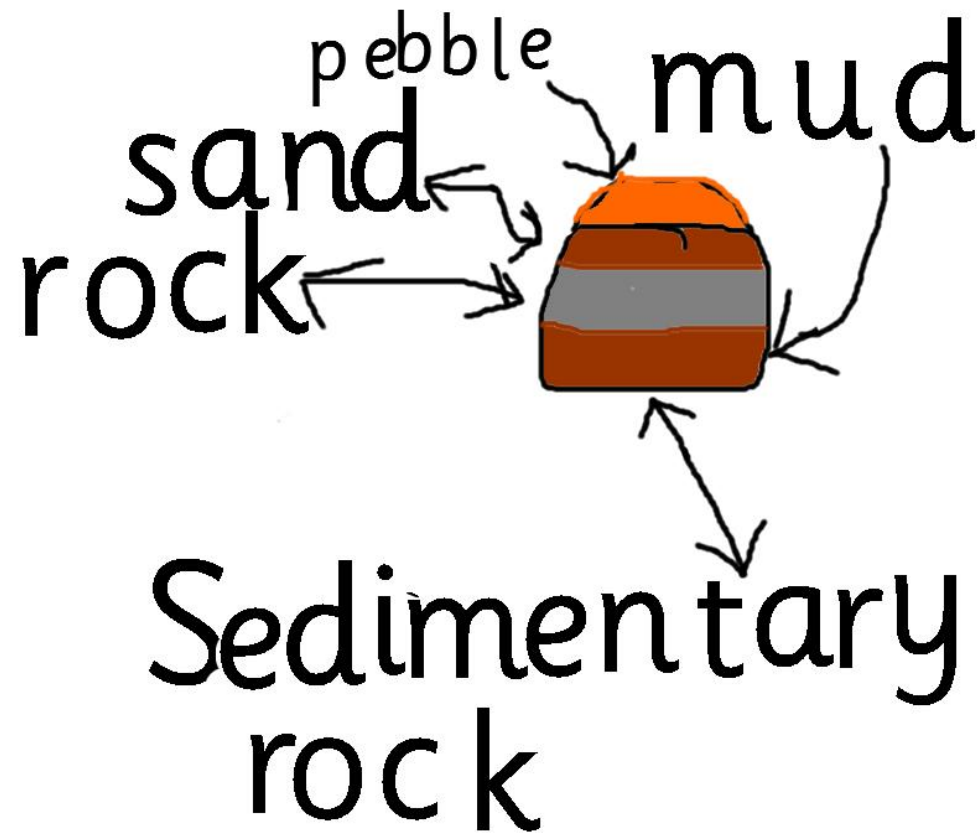

By Lino

Minerals are the same on the inside  
and the outside.

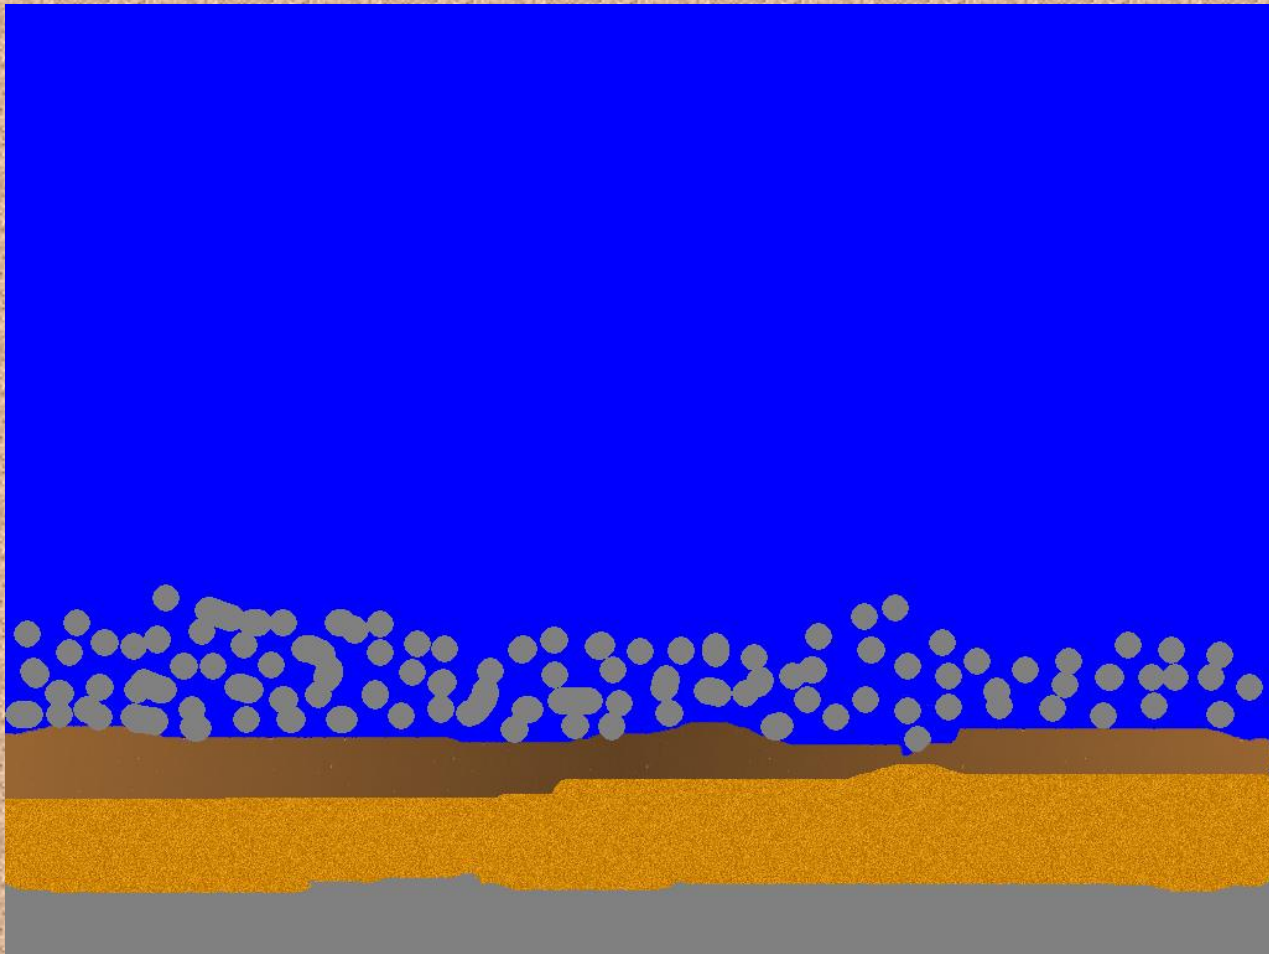

By Elijah

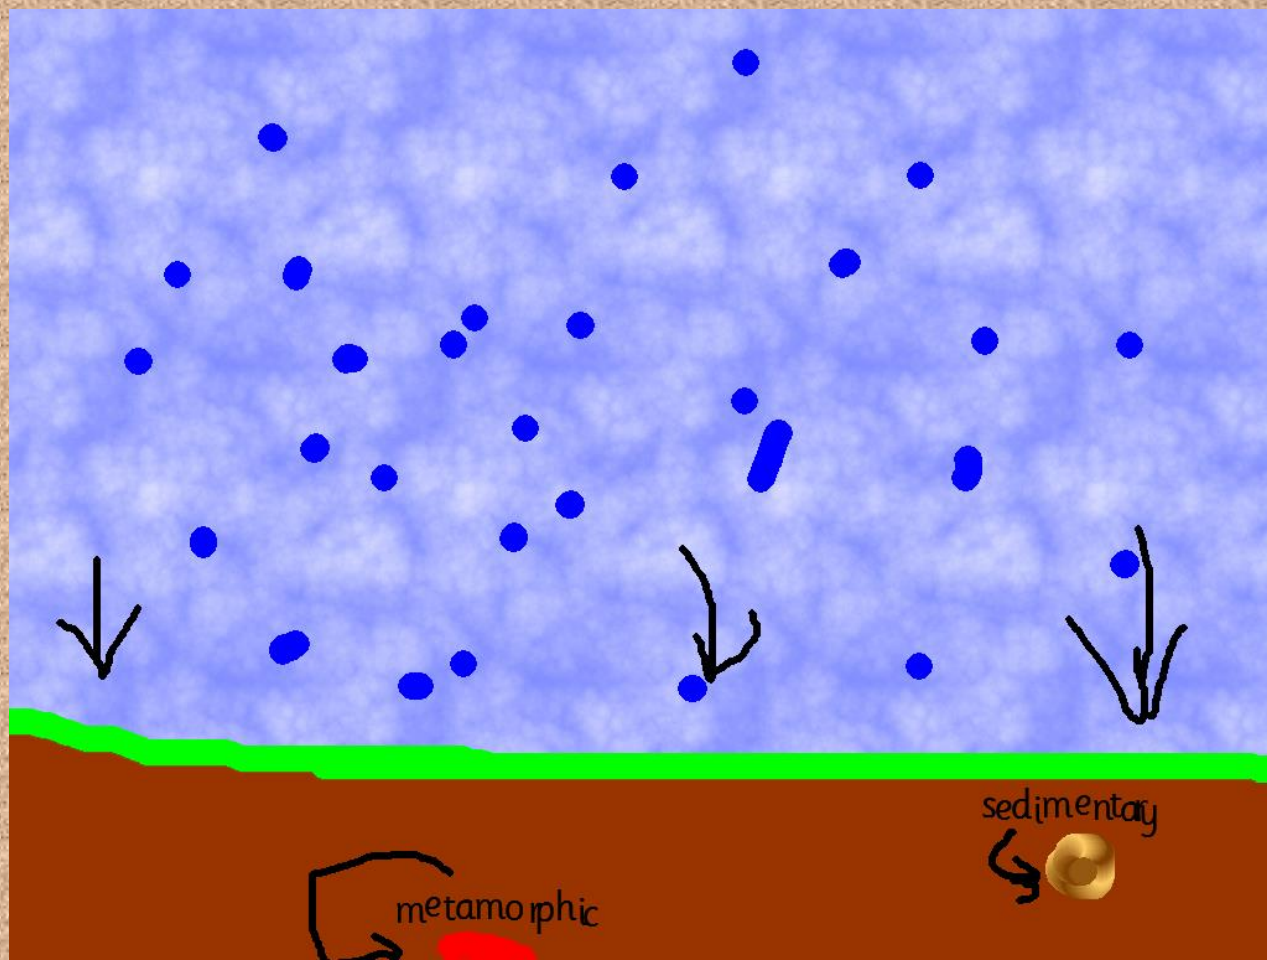

Sedimentary rocks are made from  
sand, rocks, mud and pebbles.

by Savana

Sediment builds up layers to make  
sedimentary rock.

By Michael

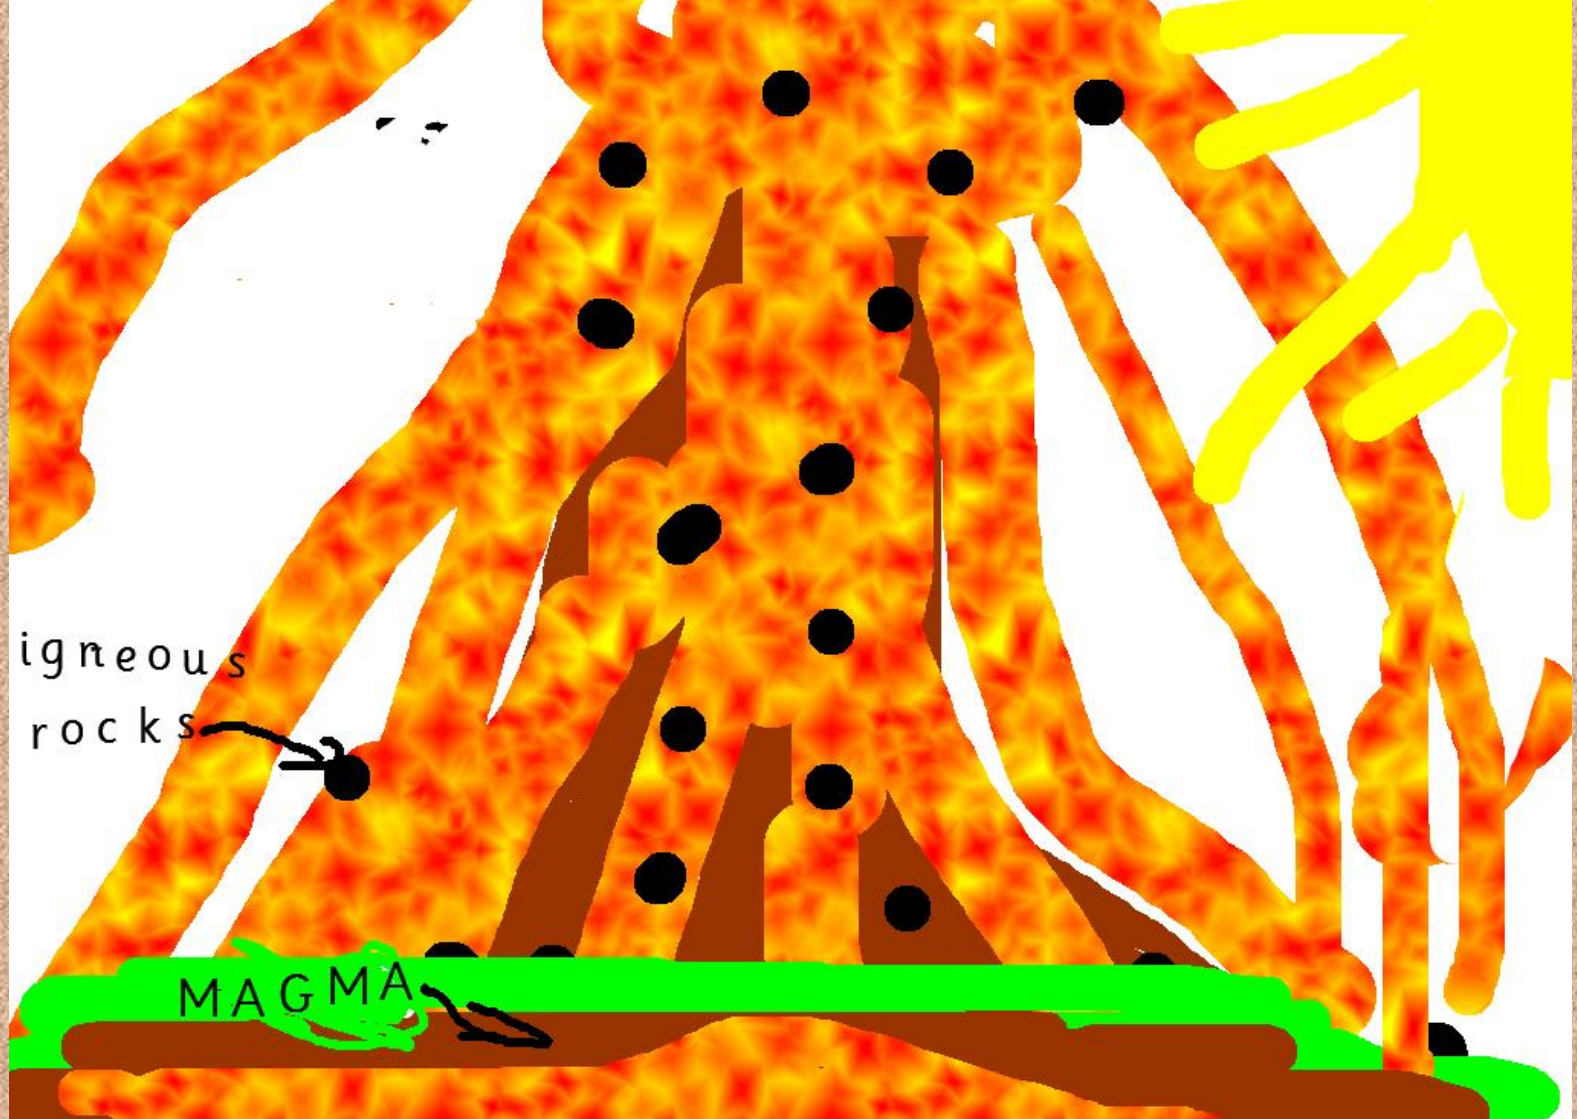

When pressure hits sedimentary rock and it gets hotter it becomes a metamorphic rock. By Cal

Igneous and sedimentary rock can turn  
into metamorphic rock. by Sarah

Igneous rocks come from magma. By  
ALEX

When magma boils and cools  
it forms pumice.

By Ana

Gold was the first mineral found.  
by Nicholas

Gold is a soft metal. by Julissa

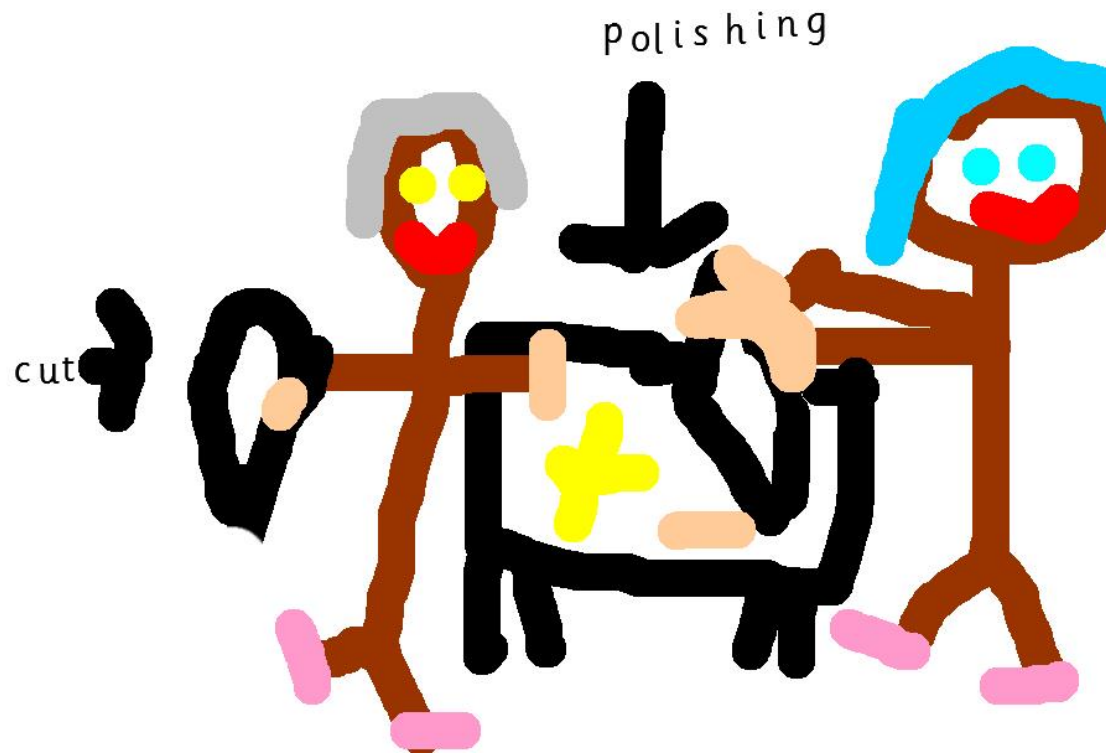

Gold is beautiful and yellow.  
By Destinee

jewelers

Jewelers must cut and polish a  
diamond.

By Harmony

When a diamond is cut it is sparkly.  
By Dakota

Marble can be almost any color.
