Build A Large Number

Number of Player: 2

Materials: Playing cards with the face cards and tens removed

Object of the Game: Use your cards to build the largest number possible

How To Play:

- Each player draws 2 cards from the deck. Do not let the other player see your cards.
- Use your cards to make the largest number possible. For example: You pick 3 and 7. You put down 73 since it is larger than 37.
- The players compare their number and the player with the larger number takes all the cards. If the numbers are the same, another round is played.
- The game ends when there are no more cards left.
- The winner is the player with the most cards.

Variation: Players pick 3 cards at a time to build 3 digit numbers
