

# Addition-Subtraction War

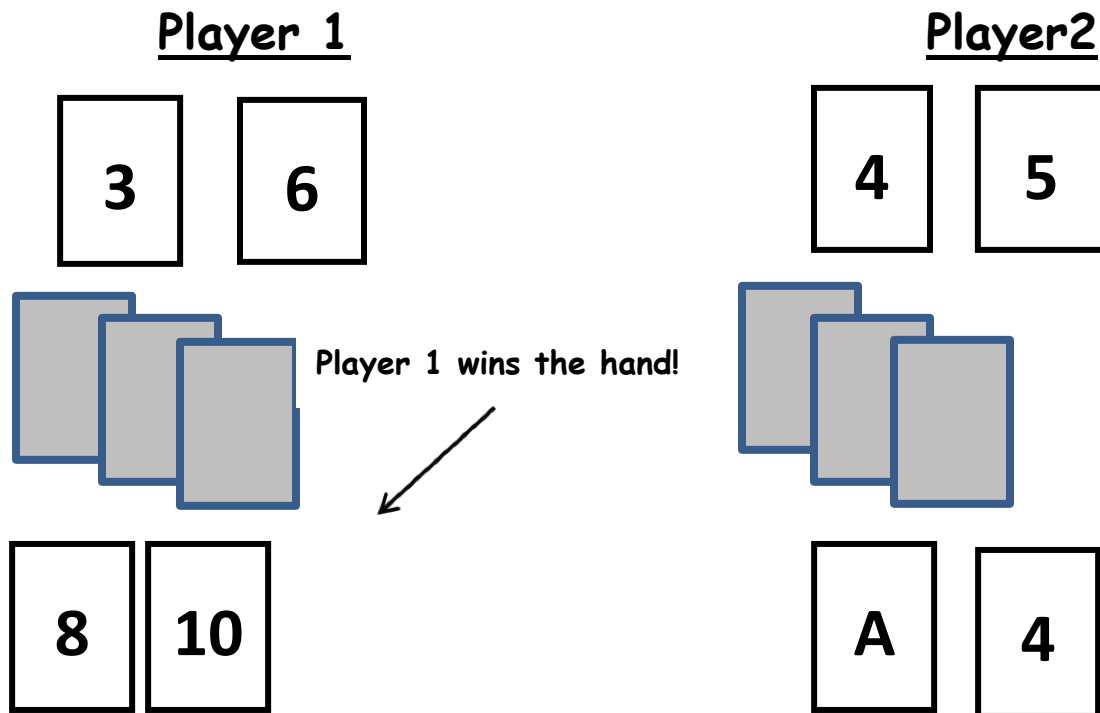

The object of the game is to win all of the cards.

All the cards are dealt out evenly between the players.

A = 1, picture cards = 10

Players turn over 2 cards (face up) and add the values. The player with the largest sum, takes all four cards.

**War:** When both players have the same sum, war is declared. Each player places 3 more cards face down, then 2 more face up to be added. The player with the largest sum wins all the cards.

**Variation:** Try subtracting! The player with the lowest difference gets the hand.
