## Warm Up

3. $\frac{1}{2} \div \frac{7}{9}$
4. $\frac{1}{3} \div \frac{1}{2}$
5. $\frac{2}{5} \div \frac{5}{8}$
6. $\frac{1}{3} \div \frac{3}{8}$
7. $\frac{1}{6} \div \frac{4}{7}$
8. $\frac{1}{2} \div \frac{2}{3}$

Learning Objective: Students will be able to make ratio tables and use them to solve problems.

## Warm Up Answers

3. $\begin{aligned} & \frac{1}{2} \div \frac{7}{9} \\ & =\frac{9}{14}\end{aligned}$
4. $\begin{aligned} & \frac{1}{3} \div \frac{1}{2} \\ & =\frac{2}{3}\end{aligned}$
5. $\begin{aligned} \frac{2}{5} & \div \frac{5}{8} \\ & =\frac{16}{25}\end{aligned}$
6. $\begin{aligned} & \frac{1}{3} \div \frac{3}{8} \\ & =\frac{8}{9}\end{aligned}$
7. $\begin{aligned} \frac{1}{6} & \div \frac{4}{7} \\ & =\frac{7}{24}\end{aligned}$
8. $\begin{aligned} & \frac{1}{2} \div \frac{2}{3} \\ & =\frac{3}{4}\end{aligned}$

## Homework Answers

### 5.1 Record and Practice Journal

## Essential Question:

How can you find two ratios that describe the same relationship?

## Lesson Objective:

Students will be able to:
make ratio tables and use them to solve problems.

## Self-Evaluation Scale

| ScOre | I can teach other students how to make ratio tables and use them to <br> solve problems. |
| :---: | :--- |
| $\mathbf{3}$ | I can make ratio tables and use them to solve problems. |
| 2 | I recognize, but still need help to make ratio tables and use them to <br> solve problems. |
| 1 | I do not know how to make ratio tables and use them to solve <br> problems. |
| 1 |  |

Learning Objective: Students will be able to make ratio tables and use them to solve problems.

Lemonade

Iced Tea
a. How many total cups does the mixture contain? $\square$ cups For every cup of lemonade, there are cups of iced tea.
b. How do you make a larger batch of this mixture? Describe your procedure and use the table below to organize your results. Add more columns to the table if needed.

| Cups of <br> Lemonade |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Cups of <br> Iced Tea |  |  |  |  |  |  |
| Total Cups |  |  |  |  |  |  |

c. Which operations did you use to complete your table? Do you think there is more than one way to complete the table? Explain.
d. How many total cups are in your final mixture? How many of those cups are lemonade? How many are iced tea? Compare your results with those of
 other groups in your class.
e. Suppose you take a sip from every group's final mixture. Do you think all the mixtures should taste the same? Do you think the color of all the mixtures should be the same? Explain your reasoning.
f. Why do you think it is useful to use a table when organizing your results in this activity? Explain.

Two ratios that describe the same relationship are equivalent ratios. You can find equivalent ratios by:

- adding or subtracting quantities in equivalent ratios.
- multiplying or dividing each quantity in a ratio by the same number.

You can find and organize equivalent ratios in a ratio table.
(1) Completing Ratio Tables

Find the missing value(s) in each ratio table. Then write the equivalent ratios.
a.

| Pens | 1 | 2 |  |
| :--- | :--- | :--- | :--- |
| Pencils | 3 |  | 9 |

b.

| Dogs | 4 |  | 24 |
| :--- | :--- | :--- | :--- |
| Cats | 6 | 12 |  |

a. You can use repeated addition with the original ratio to find the missing values.

$\therefore$ The equivalent ratios are $1: 3,2: 6$, and $3: 9$.
b. You can use multiplication to find the missing values.

$\vdots$ The equivalent ratios are $4: 6,8: 12$, and $24: 36$.

Learning Objective: Students will be able to make ratio tables and use them to solve problems.

## Making a Ratio Table

You are making sugar water for your hummingbird feeder. A website indicates to use 4 parts of water for every 1 part of sugar. You use 20 cups of water. How much sugar do you need?
You can solve this problem by using equivalent ratios. The ratio of water to sugar is 4 parts to 1 part. So, for every 4 cups of water, you need 1 cup of sugar. Find an equivalent ratio with 20 parts water.

Method 1: Use a ratio table and addition.
You can think of making a larger batch of sugar water as combining several batches of 4 to 1 mixtures. Use addition to obtain 20 in the water column.

The ratio 20 to 5 is equivalent to 4 to 1 .
$\because$ So, you need 5 cups of sugar.
Method 2: Use a ratio table and multiplication.
You multiplied the amount of water in the recipe by 5 because $20 \div 4=5$. So, you need to multiply the amount of sugar by 5 . Multiply each part of the ratio in the original recipe by 5 .

The ratio 20 to 5 is equivalent to 4 to 1 .
$\therefore$ So, you need 5 cups of sugar

## 3 Using a Ratio Table

The nutrition facts label on a box of crackers shows that there are 240 milligrams of sodium in every 36 crackers.
a. You eat 15 crackers. How much sodium do you consume?

The ratio of sodium to crackers is 240 to 36 . Use a ratio table to find an equivalent ratio with 15 crackers.

The ratio 100 to 15 is equivalent to 240 to 36 .
$\therefore$ So, you consume 100 milligrams of sodium.
b. You eat 21 crackers. How much sodium do you consume?

Notice that you can add the two middle columns in the table above.
$\therefore \quad$ So, you consume $120+20=140$ milligrams of sodium in $18+3=21$ crackers.

## 4. Using a Ratio Table

You mix 3 pints of yellow paint for every 4 pints of blue paint to make green paint. You use 10 pints of blue paint. How much green paint do you make?

The ratio of yellow paint to blue paint is 3 to 4 . Use a ratio table to find an equivalent ratio with 10 parts blue paint.

You use $7 \frac{1}{2}$ pints of yellow paint and 10 pints of blue paint.
$\therefore \quad$ So, you make $7 \frac{1}{2}+10=17 \frac{1}{2}$ pints of green paint.

## Assignment

Complete problems:
6, 8, I0, I2, I4, I6, I8, 20, 22, \& 24
on pages I94-I95 in your Big Ideas Text Book.

## Assignment Answers

4. The ratio of baseballs to gloves can be described by $8: 4,4: 2$, or $2: 1$.
5. 

| Boys | 1 | 2 |
| :---: | :---: | :---: |
| Girls | 5 | 10 |

$1: 5$ and $2: 10$
8.

| Taxis | 6 | 18 | 36 |
| :--- | :--- | :--- | :--- |
| Buses | 5 | 15 | 30 |

$6: 5,18: 15$, and $36: 30$
10.

| Towels | 14 | 7 | 28 |
| :--- | :---: | :---: | :---: |
| Blankets | 8 | 4 | 16 |

$14: 8,7: 4$, and $28: 16$
12. $\$ 68$
14.

| Printers | 2 | 4 | 8 | 16 |
| :--- | :---: | :---: | :---: | :---: |
| Computers | 5 | 10 | 20 | 40 |

16 printers

16. | Girls | 81 | 9 | 18 |
| :--- | :--- | :--- | :--- |
| Boys | 72 | 8 | 16 |

18 girls
22. Add the corresponding quantities of Recipes C and D to create Recipe F.
24. Subtract the corresponding quantities of Recipe C from Recipe F to create Recipe D.
18. Each part of the original ratio was not multiplied by the same number.
Sample answers:

| A | 5 | 25 | 125 |
| :---: | :---: | :---: | :---: |
| B | 3 | 15 | 75 | or | $\mathbf{A}$ | 5 | 15 | 45 |
| :---: | :---: | :---: | :---: |
| $\mathbf{B}$ | 3 | 9 | 27 |

20. 32 rock songs

## Essential Question:

How can you find two ratios that describe the same relationship?

## Lesson Objective:

Students will be able to:
make ratio tables and use them to solve problems.

## Self-Evaluation Scale
