

Learning Objective: Students will be able to use a formal rule to divide decimals.

Warm Up

1. $\frac{2}{5} - \frac{1}{20}$

5. $\frac{13}{16} - \frac{13}{16}$

9. $\frac{11}{20} - \frac{1}{2}$

2. $\frac{17}{19} - \frac{14}{19}$

6. $\frac{9}{11} - \frac{2}{11}$

10. $\frac{5}{12} - \frac{1}{3}$

Learning Objective: Students will be able to use a formal rule to divide decimals.

Warm Up Answers

$$1. \frac{2}{5} - \frac{1}{20} \\ = \frac{7}{20}$$

$$5. \frac{13}{16} - \frac{13}{16} \\ = 0$$

$$9. \frac{11}{20} - \frac{1}{2} \\ = \frac{1}{20}$$

$$2. \frac{17}{19} - \frac{14}{19} \\ = \frac{3}{19}$$

$$6. \frac{9}{11} - \frac{2}{11} \\ = \frac{7}{11}$$

$$10. \frac{5}{12} - \frac{1}{3} \\ = \frac{1}{12}$$

Learning Objective: Students will be able to use a formal rule to divide decimals.

Lesson 2.6

October 20, 2014

Essential Question:

How can you divide decimals?

Lesson Objective:

Students will be able to:
use a formal rule to divide decimals.

Self-Evaluation Scale

Score	Description
4	I can teach other students how to use a formal rule to divide decimals.
3	I can use a formal rule to divide decimals.
2	I recognize, but still need help to use a formal rule to divide decimals.
1	I do not know how to use a formal rule to divide decimals.

Learning Objective: Students will be able to use a formal rule to divide decimals.

$$\begin{array}{r} 4 \div 2 \\ \hline 2 \overline{)4} \end{array} \quad \frac{4}{2}$$

dividend \div divisor

dividend
divisor

Key Idea

Dividing Decimals by Whole Numbers

Words Place the decimal point in the quotient above the decimal point in the dividend. Then divide as you would with whole numbers. Continue until there is no remainder.

Numbers

$$\begin{array}{r} 1.83 \\ 4 \overline{)7.32} \end{array}$$

Place the decimal point in the quotient above the decimal point in the dividend.

$$\begin{array}{r} 3.5 \\ \hline 2 \overline{) 7.0} \\ \underline{6} \downarrow \\ 10 \end{array}$$

Learning Objective: Students will be able to use a formal rule to divide decimals.

1 Dividing Decimals by Whole Numbers

a. Find $7.6 \div 4$.

Estimate $8 \div 4 = 2$

$$\begin{array}{r}
 1.9 \\
 4 \overline{)7.6} \\
 \underline{-4} \\
 36 \\
 \underline{-36} \\
 0
 \end{array}$$

Place the decimal point in the quotient above the decimal point in the dividend.

So, $7.6 \div 4 = 1.9$.

Reasonable? $1.9 \approx 2$ ✓

b. Find $4.38 \div 12$.

$$\begin{array}{r}
 0.365 \\
 12 \overline{)4.380} \\
 \underline{-36} \\
 78 \\
 \underline{-72} \\
 60 \\
 \underline{-60} \\
 0
 \end{array}$$

Place the decimal point in the quotient above the decimal point in the dividend.

Insert a zero and continue to divide.

So, $4.38 \div 12 = 0.365$.

Check $0.365 \times 12 = 4.38$ ✓

$$\begin{array}{r} 10 \\ \hline 1 \overline{)10} \end{array}$$

$$\begin{array}{r} 10 \\ \hline 10 \overline{)100} \end{array}$$

$$\begin{array}{r} 10 \\ \hline 100 \overline{)1000} \end{array}$$

$$\begin{array}{r} 10 \\ \hline 1000 \overline{)10000} \end{array}$$

Learning Objective: Students will be able to use a formal rule to divide decimals.

Key Idea

Dividing Decimals by Decimals

Words Multiply the divisor *and* the dividend by a power of 10 to make the divisor a whole number. Then place the decimal point in the quotient and divide as you would with whole numbers. Continue until there is no remainder.

Numbers

$$1.2 \overline{) 4.56}$$

Multiply each number by 10.

$$12 \overline{) 45.6}$$

3.8

Place the decimal point above the decimal point in the dividend 45.6.

Learning Objective: Students will be able to use a formal rule to divide decimals.

2 Dividing Decimals

a. Find $18.2 \div 1.4$.

$$1.4 \overline{)18.2}$$

Multiply each number by 10.

$$\begin{array}{r} 13. \\ 14 \overline{)182.} \\ \underline{-14} \\ 42 \\ \underline{-42} \\ 0 \end{array}$$

Place the decimal point above the decimal point in the dividend 182.

So, $18.2 \div 1.4 = 13$.

Check $13 \times 1.4 = 18.2$ ✓

b. Find $0.273 \div 0.39$.

$$0.39 \overline{)0.273}$$

Multiply each number by 100.

$$\begin{array}{r} 0.7 \\ 39 \overline{)27.3} \\ \underline{-27.3} \\ 0 \end{array}$$

So, $0.273 \div 0.39 = 0.7$.

Check $0.7 \times 0.39 = 0.273$ ✓

Learning Objective: Students will be able to use a formal rule to divide decimals.

3 Inserting Zeros in the Dividend and the Quotient

Divide $2.45 \div 0.007$.

$$0.007 \overline{)2.450} \longrightarrow 7 \overline{)2450}$$

Multiply each number by 1000.
Insert a zero in the dividend.

$$\begin{array}{r} 350 \\ 7 \overline{)2450} \\ \underline{-21} \\ 35 \\ \underline{-35} \\ 00 \end{array}$$

Because $0 \div 7 = 0$,
insert a zero in the
quotient.

So, $2.45 \div 0.007 = 350$.

Learning Objective: Students will be able to use a formal rule to divide decimals.

OYO!

Divide. Check your answer.

11. $3.8 \div 0.16$

12. $15.6 \div 0.78$

13. $7.2 \div 0.048$

14. $0.18 \div 0.003$

$$\overline{16)380}$$

$$\begin{array}{r} 023.75 \\ \hline 16)380.0 \\ -32 \\ \hline 60 \\ -48 \\ \hline 120 \\ -120 \\ \hline 00 \end{array}$$

Learning Objective: Students will be able to use a formal rule to divide decimals.

Assignment

Complete problems:

14, 16, 26, 27, 32, 36, 42, 44, 48, 56, 59, & 60

on pages 97 - 99 in your Big Ideas Text Book.
