Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

Lesson 1.2

September 7, 2016

**Essential Question** How can you use repeated factors in real-life situations?

# Lesson Objective:

Students will be able to:

use formal language to describe a power and look at the specific case of perfect squares.

Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

# Self-Evaluation Scale

Score	Description
4	I can teach other students how to use formal language to describe a power and look at the specific case of perfect squares.
3	I can use formal language to describe a power and look at the specific case of perfect squares.
2	I recognize, but still need help to use formal language to describe a power and look at the specific case of perfect squares.
1	I do not know how to use formal language to describe a power and look at the specific case of perfect squares.

Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

# Activity 1, 2, & 3

With a partner, work on Activity 1, 2, & 3 on pages 7, 8, & 9 of your Big Ideas Record and Practice Journal.

## September 7, 2016 Lesson 1.2

**Learning Objective:** Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

A **power** is a product of repeated factors. The **base** of a power is the repeated factor. The **exponent** of a power indicates the number of times the base is used as a factor.

Power	Words
$3^2$	Three <i>squared</i> , or three to the second
$3^3$	Three <i>cubed</i> , or three to the third
$3^4$	Three to the fourth

Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

## 1 Writing Expressions as Powers

Write each product as a power.

a.  $4 \cdot 4 \cdot 4 \cdot 4 \cdot 4$

Because 4 is used as a factor 5 times, its exponent is 5.

••• So,  $4 \cdot 4 \cdot 4 \cdot 4 \cdot 4 = 4^5$ .

b.  $12 \times 12 \times 12$

Because 12 is used as a factor 3 times, its exponent is 3.

••• So,  $12 \times 12 \times 12 = 12^3$ .

Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

# On Your Own

Write the product as a power.

1.  $6 \cdot 6 \cdot 6 \cdot 6 \cdot 6 \cdot 6$

2.  $15 \times 15 \times 15 \times 15$

Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

## 2 Finding Values of Powers

Find the value of each power.

a.  $7^2$

$$7^2 = 7 \cdot 7$$

$$= 49$$

Write as repeated multiplication.

Simplify.

b.  $5^3$

$$5^3 = 5 \cdot 5 \cdot 5$$

$$= 125$$

The square of a whole number is a **perfect square**.

Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

3

## Identifying Perfect Squares

**Determine whether each number is a perfect square.**

a. 64

Because  $8^2 = 64$ , 64 is a perfect square.

b. 20

No whole number squared equals 20. So, 20 is not a perfect square.

**Learning Objective:** Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

# On Your Own

**Find the value of the power.**

3.  $6^3$

4.  $9^2$

5.  $3^4$

6.  $18^2$

**Determine whether the number is a perfect square.**

7. 25

8. 2

9. 99

10. 100

Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

# Assignment

Complete problems 4, 5, 14, 15, 25, 26, 36, 37, & 38 on pages 14 & 15 in your Big Ideas Text Book.

Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.

Lesson 1.2

September 16, 2015

**Essential Question** How can you use repeated factors in real-life situations?

# Lesson Objective:

Students will be able to:

use formal language to describe a power and look at the specific case of perfect squares.

Learning Objective: Students will be able to use formal language to describe a power and look at the specific case of perfect squares.
